

Automatic Recipe Generator

Fix(2)

- 1.) Add items when scanning labels : As the user scans the labels of their ingredients, the labels/ingredient names will be displayed as they scan in the camera page in a translucent bubble manner, and will “float” to the top of the screen and show the user their recently scanned items.
- 2.) Add a substitution page: Adding a page to help with food substitutions, where users can enter an item and the item substitutes will be presented.

Keep(2)

- 1.) Keep the swiping motion as it is more intuitive than the pressing motion and users enjoy the swipe motion more than the pressing motion.
- 2.) Keep the Scan Feature : Users have shown to like the Label Scanning feature over the manual entry in all test cases.
